

SolarInvert Energy Solutions

North Asia Super Hybrid Capacitor Company

Overview

Will hybrid super capacitor revolutionize data center ancillary power generation?

To this end, we partnered with Donghwa ES, a South Korean based energy storage company, to develop the Hybrid Super Capacitor (HSC) – a next generation energy storage system that sets new standards for redundancy and safety, and which we believe has the potential to revolutionize data center ancillary power generation.

What is a hybrid super capacitor (HSC)?

Musashi Energy Solutions develops, manufactures, and sells hybrid super capacitors (HSCs), which are attracting attention for the realization of a carbon-neutral society. HSC is a sustainable power storage device that features high output, long life, and high safety.

What are hybrid supercapacitor cells?

With their characteristic safety and reliability, HSCs have garnered significant adoption. Our Hybrid SuperCapacitor cells combine the power density, high cycle capabilities and long life of electric double-layer capacitors (EDLC) construction with higher energy density approaching that of lithium-ion battery (LIB) technology.

What is the difference between a capacitor and a super capacitor?

Compared to regular capacitors, super capacitors can store much larger electric fields, and use both electrostatic and electrochemical storage principles to hold electric charge. While offering the same general characteristics as capacitors, they provide many times the energy storage and energy delivery. What makes the HSC technology different?
