

SolarInvert Energy Solutions

North Korea special energy storage battery price

Overview

How much does a battery storage system cost?

Around the beginning of this year, BloombergNEF (BNEF) released its annual Battery Storage System Cost Survey, which found that global average turnkey energy storage system prices had fallen 40% from 2023 numbers to US\$165/kWh in 2024.

Will a 60% tariff increase energy storage costs?

“What we found is that with the 60% tariff, the cost [of a turnkey energy storage system] increases by 60% compared to 2025, so this is quite a big cost jump if the US actually decided to do so,” Kikuma says.

Will China's battery import tariffs rise in 2026?

Tariffs rises were on the table for whichever candidate had won the election since Biden had, prior to stepping down from the race for Kamala Harris, announced a rise in Chinese battery import duties from 7.5% today to 25% beginning in 2026, and the industry was already making preparations for that.
