

SolarInvert Energy Solutions

Optional voltage inverter

Overview

How to select a DC inverter?

Make selection according to the applicable motor capacity. (When the inverter capacity is larger than the motor capacity, make selection according to the motor capacity.) • For the 75K or higher inverters, or whenever a 75kW or higher motor is used, always connect a DC reactor. Connect the reactor to terminal P1 and P of the inverter.

How to choose an AC inverter?

An AC reactor connected on the input side of the inverter improves power factor and reduces harmonic currents on the input side. Make selection according to the applicable motor capacity. (When the inverter capacity is larger than the motor capacity, make selection according to the motor capacity.).

Which terminal should be used in a power inverter?

Use terminal SD on the inverter. Output signal (RUN, SU, etc.) provided with the inverter as standard can be output from the open collector terminal. Analog output Analog signals such as the output frequency and output current can be output from the voltage output terminal (AM0) and current output terminal (AM1).

What is a DC inverter?

Standard Specifications (Electrical Installation) (2013 revisions) supervised by the Ministry of Land, Infrastructure, Transport and Tourism of Japan.) A DC reactor connected on the DC side of the inverter improves power factor and reduces harmonic currents on the input side.

How to install a new inverter?

- When using a plug-in option, connect the plug-in option using a cable that can be routed through the space between the front cover and the control

circuit terminal block (700 series: 7 mm, 500 series: 0.8 mm). When replacing with a new inverter, the attachment make the new inverter to be installed using holes of conventional model.

Can I add additional input/output terminals to my inverter?

Input/output terminals can be added. This option is useful when additional physical terminals are required, such as when an inverter with less input/output terminals such as the FR-E800-E (Ethernet model) or the FR-E800-SCE (safety communication model) is used.

Optional voltage inverter

Off Grid Hybrid Inverter

Off Grid Hybrid Inverter Single Phase
5.5kW 6.2kW 230Vac Output power factor 1.0 High PV input voltage range 500Vdc Max Built-in MPPT solar controller 100A WiFi remote monitoring optional
