

SolarInvert Energy Solutions

Parts required for C-shaped steel solar photovoltaic panel installation

Overview

What are the components of a solar panel setup?

A basic solar panel setup consists of 4 main components. These are a battery, solar panel, charge controller, and inverter. Don't connect the solar panel directly to the battery. Doing so can damage the battery. You need to instead connect both to a charge controller that regulates the incoming solar energy to safely charge the battery.

What are solar panels made of?

All the profiles used in our solar panel structure systems are made of S350-GD galvanized structural steel (from Zn 450 up to ZnMg 310 gr/m²), corrosion resistant, have a very low weight and have a high strength. Because of this, the structure will last much longer than the solar panels mounted on it.

Why should you choose a metal structure for solar panels?

As solar panels are becoming more and more popular around the world, more and more businesses are looking to take advantage of them. The metal structures offered by us are ideal for photovoltaic panels (solar panels), and because they are made of light steel profiles designed and manufactured with high precision, the assembly becomes easy and fast.

Can a solar system be fixed to a concrete ballast?

The system can be fixed to concrete ballasts according to the specified parameters. The system can be fixed with ground screws according to the specified parameters. Our experts carry out the design, numerical modelling and physical testing of components and complete systems for mounting solar panels.

Why do car parks have photovoltaic panels?

Increasing electricity consumption and the need to reduce CO₂ emissions are the main reasons why car parks equipped with photovoltaic panels are

increasingly favored in cities that want to be as green as possible.

Parts required for C-shaped steel solar photovoltaic panel installation

Solar Purlins-Rohs& GB& ISO Certified

The main function of photovoltaic purlins is to connect and fix profiles and main beams, ensuring the stability and safety of photovoltaic modules. By using bolts or other fasteners, the purlins ...
