

SolarInvert Energy Solutions

Photovoltaic double-glass module power station

Overview

The mainstream double-glass double-sided modules have the advantages of long life cycle, low attenuation rate, weather resistance, high fire rating, good heat dissipation, good insulation, easy cleaning, and higher power generation efficiency. What is a double glass (Dual Glass) solar panel?

A double glass (Dual Glass) solar panel is a glass-glass module structure where a glass layer is used on the back of the modules instead of the traditional polymer backsheet. Double glass solar panels were originally heavy and expensive, but the lighter polymer backing panels gained most of the market share.

What are the benefits of double glazed solar panels?

Double-glazed solar panels, also known as dual glass solar panels, offer increased reliability, especially for large-scale photovoltaic projects. They provide better resistance to higher temperatures, humidity, and UV conditions and have better mechanical stability, which reduces the risk of microcracks during installation and operation.

Is double glass a good choice for a PV farm?

Regarding the moisture issue, the main argument against double glass modules is addressed by the use of polyolefins as encapsulating substances. The problem is further solved by the execution, as confirmed by e.g. PVEL tests.

What changes have been made in glass-glass modules?

In the case of Glass-Glass modules, an important change has been made by replacing EVA with polyolefins as an encapsulating substance. This is due to the free radicals generated during the EVA cross-link lamination process. Traditional backsheets are somewhat permeable to free radicals, but the double glass module is not.

How long does a multi-busbar solar panel last?

Multi-Busbar (MBB) solar panels, as produced by manufacturers like AKCOME, Jinery, and ZnShine, come with extended warranties of up to 12 years or even 15 years due to their durability. The length of the warranty for a Multi-Busbar solar panel is 12 or 15 years.

Why do photovoltaic panels degrade less over the years?

Glass-glass photovoltaic panels degrade less over the years due to the strength of the glass. They are more resistant to blown sand and corrosion in general, and better withstand gusts of wind and mechanical snow loads.

Photovoltaic double-glass module power station

Double-Glass Module Solar System Photovoltaic Power Station ...

Mar 12, 2025 · JDSOLAR is the world's leading manufacturer of high performance photovoltaic products for residential, commercial and terrestrial photovoltaic power generation systems.
