

**SolarInvert Energy Solutions**

# **Photovoltaic inverter rain protection level**

## Overview

---

With their IP65 or IP66 ratings, photovoltaic inverters are designed to provide protection against rain, snow, and high humidity levels. How to protect your inverter from the rain?

If you live in an area with a lot of rain or moisture, it may be a good idea to purchase a water-resistant enclosure. These are designed to keep your inverter safe from the rain, but they will also allow you to use your device in wet conditions without any potential damage. 4. Install a Rain Cover Another option is to install a rain cover.

How do I Choose an inverter for a solar energy system?

When selecting an inverter for a solar energy system, one important factor to consider is its IP (Ingress Protection) rating. The IP rating indicates how well the inverter is protected against dust, moisture, and other environmental factors.

Why do inverters need an IP rating?

Inverters are often installed in outdoor environments, where they are exposed to rain, dust, and temperature variations. The IP rating plays a critical role in determining whether the inverter can withstand these harsh conditions without suffering damage or reduced performance.

How does the IP rating affect an inverter's suitability?

Let's examine how the IP rating affects an inverter's suitability for outdoor and harsh environments. An inverter with a high first-digit rating (e.g., IP65 or IP66) provides complete protection against dust and dirt, preventing it from entering the unit and causing internal damage.

What is an IP65 rated inverter?

The higher the number, the better the protection. For example, an IP65 rating means the inverter is completely dust-tight (level 6) and has no entry of dust

particles that could affect its performance. To learn more about solid protection levels, visit [here 1](#).

What is the difference between IP65 and IP66 inverters?

A rating of IP65 means the inverter is protected against water jets, while IP66 offers better protection, ensuring the inverter can handle heavy rain or water exposure. Learn more about water protection levels [here 4](#). Many high IP-rated inverters are designed to withstand a wide range of temperatures.
