# **Photovoltaic inverter teaching aids**

## Overview

---

How can a student learn about solar PV?

Through the help of experiments a student can understand underlying principles of solar PV, its applications in standalone system and challenges like sizing of system, MPPT, installations etc. by doing various experiments. The system also provides scope for further research.

Why do I need a PV inverter?

This is meant to answer the “why’s and how’s” of PV inverters. Since the PV array is a dc source, an inverter is required to convert the dc power to normal ac power that is used in our homes and offices. To save energy they run only when the sun is up and should be located in cool locations away from direct sunlight.

What is solar PV training & research system?

Solar PV Training and Research system is a compact miniaturised version of an actual Solar PV standalone power plant. The system enables user to study wiring and interconnections of different components involved in the system to develop basic understanding of working and operation of a Standalone PV system.

What is a solar PV maintenance training system?

This Solar PV Maintenance Training System allows students to develop the specialized skills and knowledge needed for working with the common types of PV systems. The trainer teaches connection, operation, programming and troubleshooting of AC/DC and grid-connected systems. Understand the principles of Solar Tracking System.

How many experiments are there in solar PV standalone systems?

In second section there are 4 experiments through which user can study about the different components involved in solar pv standalone systems, their

interconnection and usage. In third section user can research on maximum power point tracking of the solar panels.

What do students need to know about solar energy installation?

Students are expected to assembly solar energy panel system by connecting the electrical components with proper wiring and connection. Familiarization of solar cell installation procedure and safety. Reading an technical drawing of electrical diagram and cisrcuit.
