Photovoltaic module exports in the third quarter

Overview

Which country exports the most PV modules in 2022?

The European Union was the biggest destination for China's PV exports in 2022, buying nearly \$23 billion worth of products, up 113 percent year-on-year. This is equivalent to about 84 GW of modules, more than half of China's total module exports in 2022.

Will China continue to export photovoltaic products in 2023?

The value of photovoltaic products exported by China hit a record in the first 10 months of 2023, with industry experts saying the momentum will persist through the year, buoyed by higher demand amid a green energy transition worldwide.

What is China's photovoltaic export value?

The export value, which includes photovoltaic products such as silicon wafers, cells and modules, reached about \$43 billion during the first 10 months, the China Photovoltaic Industry Association said on Friday.

How many solar modules does China Export in 2022?

This is equivalent to about 84 GW of modules, more than half of China's total module exports in 2022. According to Tan Youru, an analyst at BloombergNEF, China exported 212 GW of solar cells and modules in the first 10 months of 2023, some 19 percent more than exports in the whole of 2022.

Did China Export more solar cells in the first 10 months?

According to Tan Youru, an analyst at BloombergNEF, China exported 212 GW of solar cells and modules in the first 10 months of 2023, some 19 percent more than exports in the whole of 2022. While the value of solar product exports from China was flat in the third quarter, volumes rose month-on-month, thanks to lower module prices, he said.

How are future photovoltaic modules priced?

Based on these market scenarios, future prices for photovoltaic modules were estimated using the “photovoltaic learning curve,” which builds on the historic experience that with each duplication in the total number of modules produced, the price per module fell by roughly 20 percent.
