

## SolarInvert Energy Solutions

# Photovoltaic panel price fluctuations

**ESS**

## Overview

---

Susceptible to market demand, production plans, and socioeconomic factors, prices across the PV supply chain have fluctuated since late 2023, a pivotal period of p-type to n-type technology transition. Will price fluctuations affect the photovoltaic module market?

As the global energy transition accelerates, the photovoltaic (PV) industry, as a key component of renewable energy, continues to attract significant attention for its promising development prospects. However, price fluctuations in the photovoltaic module market remain a critical factor influencing the industry's growth.

What factors affect the cost of photovoltaic modules?

1. Cost Factors Driving Price Fluctuations The cost of photovoltaic modules is primarily composed of solar cells, glass, encapsulation film, and labor expenses.

How are photovoltaic module price adjustments affecting industry players?

The current round of photovoltaic module price adjustments has imposed significant operational pressure on industry players. Leading companies, with their high R&D costs, are at a disadvantage in the price competition. Meanwhile, small and medium-sized enterprises find it challenging to endure prolonged price wars.

How much does a solar panel cost?

Average EXW prices from distributors for residential solar panels are reported between €0.125/W and €0.100/W, depending on the volumes. US DDP: The spot price for TOPCon utility-scale modules DDP US rose this week from 0.71% to \$0.284/W.

Will photovoltaic module prices go down in 2025?

However, given the supply-demand pressures and the competitive landscape

of the industry, photovoltaic module prices are expected to remain in a low adjustment phase in 2025. Smaller enterprises may intensify their inventory clearance efforts to survive, which could create temporary downward pressure on market prices.

What is changing in the solar PV industry?

This in-depth webinar explores the dynamic transformations occurring within the global solar photovoltaic (PV) industry. As geopolitical factors, trade policies, and manufacturing strategies evolve, the landscape of solar PV production and distribution is undergoing significant change. **WATCH IT NOW**
