Photovoltaic panels installed on rooftops around the Vatican

Overview

Does the Vatican have solar power?

These new photovoltaic installations build on the foundation laid over fifteen years ago when 2,500 solar panels were installed on the Paul VI Audience Hall, making it one of the largest solar-powered buildings in Rome. In addition to harnessing solar power, the Vatican is also making strides in promoting electric mobility.

Does the Vatican have a rooftop solar system?

The Vatican, the world's smallest sovereign state, has stepped up its fight against global warming by installing a huge rooftop solar energy system.

Where are solar panels located in Rome?

Sometimes the solar arrays are situated on top of greenhouses, interwoven among crops, or elevated plants. Where is the Vatican's solar installation located?

The agrivoltaic plant is situated on the Holy See's property at Santa Maria di Galeria on the outskirts of Rome.

How long did it take ACEA to install a photovoltaic roof?

Italian energy supplier ACEA installed the photovoltaic roof in just six months in the Courtyard of the Corazze entrance. "The most difficult thing is to integrate and find spaces to build photovoltaic infrastructure in places that are already heavily built up," said ACEA president, Barbara Marinali.

Can a photovoltaic roof save the Holy See?

More than 2,000 photovoltaic panels have been fixed to the roof of one of the city state's main buildings, enabling the Holy See to cut its carbon dioxide emissions by about 225 tonnes a year, saving the equivalent of 80 tonnes of oil annually.

Does the Vatican have a green energy policy?

The Vatican's commitment to green energy is further exemplified by its partnership with the utility company Acea, which now supplies the state with electricity exclusively from renewable sources. This shift ensures that all the energy consumed within the Vatican's walls is entirely green, setting a powerful example for the global community.
