

## SolarInvert Energy Solutions

# Photovoltaic panels rooftop paving with tight seams

## Overview

---

What is a metal standing seam roof with bonded solar panel?

This metal standing seam roof with bonded solar panel delivers an efficient and effective roofing system that performs just as well as it looks. Unlike traditional mounted solar photovoltaics systems, Catnic SolarSeam is bonded to the roof panel, offsite, creating a low-profile and seamless finish that's guaranteed to produce energy for 25 years.

How do you mount solar PV systems to a seam roof?

Mounting solar PV systems to a seam roof is relatively straight forward and fast, which reduces install time and decreases labour costs. The clamps are secured directly over the seam which is then fastened with a screw at the side, the rail then connects directly to the clamp using a hammerhead bolt and L-Adaptor.

Which PV modules are suitable for Rheinzink double standing seam roofs?

Suitable PV modules for RHEINZINK double standing seam roofs in the centre-to-centre dimensions 530 mm (600 mm belt) and 430 mm (500 mm belt). The individual modules can then be precisely installed in the specified seam arrangement. Rheinzink PV is suitable for both new roofing as well as retrofitting.

What is a lightweight solar roof?

Lightweight solar roof offering savings on carbon footprint, materials, installation, and maintenance in comparison with standard crystalline panels. No need for south facing installations or additional wind load calculations as there is no frame, the laminate is bonded directly to the roof panel profile.

What is a PV system?

The innovative PV system is an architecturally sophisticated, visually roof-integrated solution and a real eye-catcher. Our PV modules are available to fit

roof coverings that use our double standing seam system. It is important to choose the right panel width.

Can solar panels be installed on a Catnic urban roof?

Solar Seam panels can also be installed on pitches down to five degrees, giving your project the design flexibility it needs. BiPVco solar modules on a Catnic Urban metal standing seam roof are fully MCS certified and all modules are electrically tested before and after being laminated to the Catnic Urban profile.
