

SolarInvert Energy Solutions

Power generation container room customization

Overview

What is a containerised generator?

Our Containerised Generators deliver robust, high-capacity power from 300–3,000 kVA in secure, weather-resistant enclosures. Designed for challenging environments and critical applications, they offer noise reduction, easy transport, and bespoke configuration to meet your site's exact needs.

What size generator container do I Need?

Our generator containers for Type 2, 3, and 4 gas engines have a standard 40-foot length. Width and height depend on engine type, the application (power generation only or CHP) and ambient conditions. Customized sizes to accommodate special project requirements are available on request.

Why should you choose a containerised generator?

Containerised Generators are trusted across industries where reliability and resilience are non-negotiable, such as Healthcare and Rail infrastructure. Every unit can be tailored to your project with options for fuel type, noise attenuation, and space-saving layout.

What is a containerized power solution?

Each containerized power solution by Liyu Power is built to meet rigorous demands, ensuring stable and long-lasting energy in diverse environments. With our high-performance gas engines enclosed in durable containers, you gain a flexible and robust power source suitable for various industries and remote projects.

How does a generator work?

A generator provides standby power until the mains power can be reinstated during a power outage. This is supported by a UPS (Uninterruptible Power Supply) which ensures a seamless transition from your mains power to your backup power supply. Batteries provide power to your UPS and generator.

What is a type 6 generator container?

Our Type 6 generator containers consist of two or three pre-assembled modules, depending on the engine type and the application. The overall package (gas engine, container, and auxiliary components) is available for 65, 70, 75 and 80 dB (A) in 10m (surface sound pressure level according to DIN 45635).
