

## SolarInvert Energy Solutions

# Power sdh base station project

## Overview

---

Optical transmission is a key process to provide the optimal synchronization network for critical services. For more than 30 years, operators have provided reliable Plesiochronous.

To provide a synchronous time source for smart grid substations, an entire WDM/OTN transport and IP network must support clock.

Telecom networks require MS-OTN and IP networks to implement clock synchronization. Frequency synchronization is a prerequisite for time synchronization and.
