Prado Camping Outdoor Power Supply

Overview

What is a good rear outlet spec for a Prado 150?

From what I've read on Prado forums the rear outlet spec for the 150 is 220V, ~0.45A, 100W. Thanks Bazooka. Probably a bit skinny for the OP's application. Some fridges will happily run directly from that outlet but you'd need to test yours. That would save the lithium/battery box for your camp.

How do I get power to the rear of my Prado?

It is relatively easy to get power to the rear of the Prado if you know how to remove the sill trims etc. Most run cable through the left side cable grommet into the interior and then through the sills. Be careful penetrating the cable grommet as many have come to grief damaging the wiring loom.

Can a 240V inverter be plugged into a Prado?

The 240v ac OUT in the Prado is probably only a small capacity 12v to 240vac inverter which most likely isn't a FULL SINE WAVE device and so what you plug into it has to be able to accept the "so called" modified sine wave power coming out of that base.

Does pradopoint have a private message system?

Welcome to the updated Pradopoint. The private message system has been enabled. I know this seems a very basic question and i manage to pack everything away but im never completely happy with the set up. If anyone has any sugegstions feel free to throw them my way. I'll lay down a bit of background info:
