Praia Communication Green Base Station Contracting

Overview

What is a green base station solution?

The green base station solution involves base station system architecture, base station form, power saving technologies, and application of green technologies. Using SDR-based architecture and distributed base stations is a different approach to traditional multiband multimode network construction.

How can a base station adapt to the tidal effect?

Processing devices in the baseband pool can be dynamically scheduled to process baseband signals of different RRUs. This enables the base station to adapt to the tidal effect of mobile communications systems and maximize utilization of baseband resources. The RRU can be deployed near the terminal user.

What should a base station do in a wireless communications network?

In a wireless communications network, the base station should maintain high-quality coverage. It should also have the potential for upgrade or evolution. As network traffic increases, power consumption increases proportionally to the number of base stations. However, reducing the number of base stations may degrade network quality.
