Price of lithium used as outdoor power source in Albania

Overview

Is the wholesale market in Albania still operating under the Third Energy Package?

The wholesale market in Albania continues to operate under the framework of the Third Energy Package, as the Electricity Integration Package (EIP) has yet to be transposed into national law, despite the deadline of 31 December 2023. An infringement procedure for non-transposition has been initiated by the Secretariat.

Is the energy sector a sustainable source of growth in Albania?

The National Energy Strategy 2018 – 2030 states that the energy sector has the potential of being a sustainable source of growth for the country over the short to medium and long-term. Albania has the potential for increasing the amount of electricity produced domestically and therefore decreasing necessary energy imports.

How much gas will Albania consume in 2040?

According to the National Energy Strategy, annual gas consumption should reach 1.5 bcm by 2030 and 1.7 bcm in 2040. The Albania energy market report provides expert analysis of the energy market situation in Albania. The report includes energy updated data and graphs around all the energy sectors in Albania.

How much electricity is consumed in Albania in 2023?

Losses in transmission increased by 10.1 % and the weight that occupies in the total electrical losses is 13.3 %. The consumption of electricity by households reaching the value 3,117 GWh in 2023, while the consumption of electricity by non-households reaching the value 3,104 GWh. Albania is a net energy importer.

Will Albania become a net exporter of electricity until 2030?

It also calls for the development of a “green deal diplomacy”, aimed at persuading countries around the world to pursue the energy transition. This narrative as advanced the interest of the Albanian Government to invest on electricity production and become a net exporter of the electricity until 2030.

What is the energy policy of Albania?

Energy Policy of Albania include the promotion for the use of renewable energy sources beyond hydropower due to the significant potential our country has for photovoltaic and wind energy production, and its favorable geographical position, climate conditions and high intensity of the solar radiation for the use of solar energy.
