# Principle of outdoor wireless base station AP

## Overview

---

Is TP-Link a good wireless base station?

TP-LINK's 5GHz 300Mbps \* Outdoor Wireless Base Station is specifically designed to provide an effective solution for outdoor wireless networking applications. With its centralized management platform and high degree of flexibility, it is the ideal choice for providing point-to-point, point-to-multipoint, and outdoor Wi-Fi coverage.

What are outdoor access points?

Outdoor access points (APs) are wireless networking devices designed to provide Wi-Fi coverage in outdoor environments. They are frequently utilized in industrial and corporate environments where outdoor Wi-Fi access is necessary, as well as in public spaces like parks, stadiums, campuses, and locations for outdoor events.

What is a long-range outdoor access point?

A long-range outdoor access point is a type of wireless access point that is especially designed to give long-distance Wi-Fi connectivity in outdoor locations. It is perfect for applications where users must access a wireless network from a distance, as in a big campus, park, industry, or remote places.

What is a long-range wireless access point?

It is perfect for applications where users must access a wireless network from a distance, as in a big campus, park, industry, or remote places. When compared to ordinary outdoor access points, long-range access points often have a broader coverage area because they employ directional antennas and better transmission power.

What is a wireless base station?

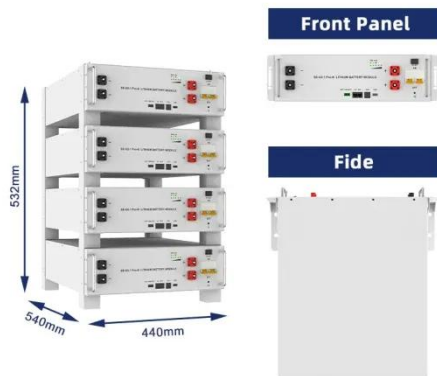

A wireless base station refers to the antenna tower and the associated BBU (Base Band Unit). Fig. 8.1 and Fig. 8.2 (Anatomy of a common wireless

system, Cellular base station infrastructure) illustrate this infrastructure.

What is a wireless base station (BBU)?

A wireless base station, often referred to as a BBU (Base Band Unit), is a device that manages wireless communication between user devices and the core network. It takes care of the medium access control of the wireless spectrum. The BBU is usually associated with the antenna tower and is responsible for the reverse actions happening in the upstream direction. Historically, the BBU was located in a powered room at the bottom of a cellular tower, as shown in Fig. 8.2.
