

**SolarInvert Energy Solutions**

# **Production of 3 2v to 12v inverter**

## Overview

---

How to design a 12VDC inverter circuit?

The aim of the inverter circuit is to convert 12VDC to 220VAC, Now to achieve this, we have to first convert 12VDC to 12VAC first followed by 12VAC to 220VAC using a step up transformer. In short, we can classify the designing of inverter circuit into three stages: 1) Driver stage 2) Power stage 3) Transformer.

What does a 12V to 230V power inverter do?

A 12V to 230V power inverter converts 12V DC power to 230V AC power. It is ideal for various users including caravaners, truck drivers, doctors, electricians, joiners, and anyone who enjoys camping or boating.

How much power does a 12V inverter produce?

Their 12V inverter can produce as many as 8000W and has a very useful LCD screen. Weighing just under 12 lbs, the Energizer is only 15 inches long and 8 inches high, meaning you can conserve the all-valuable space in your rig.

What are the three stages of inverter circuit design?

In short, we can classify the designing of inverter circuit into three stages: 1) Driver stage 2) Power stage 3) Transformer The tasks that are performed in driver stage are generation of modified sine wave, monitoring the battery voltage, handling the other housekeeping tasks such as short circuit protection, etc.

How to amplify current in an inverter?

As the inverter output power is 600VA and it is 75% efficient so the input current at full load comes out to be 75Amp approx. (using ohm's law). Now this current amplification task is performed by the power stage. In this stage, two N-Mosfets are configured in push-pull topology to amplify the current.

## How does a I293d inverter work?

Arduino is generating a modified sine waveform of 5V which is amplified to a level of 12V using L293D ic. Battery voltage is monitored every 20ms using timer interrupt. As the inverter output power is 600VA and it is 75% efficient so the input current at full load comes out to be 75Amp approx. (using ohm's law).
