Russian Energy Storage Power Station Division of Work Notice

Overview

Should Russia create an infrastructure for EV charging stations?

Russia must also “create an infrastructure for charging stations” for EVs, he said. Rosatom announced on November 23 that it had established a new subsidiary — Renera — dedicated to the manufacture of energy storage systems.

Will Russia build a Gigafactory in 2023?

January 5, 2023: Russia’s prime minister Mikhail Mishustin (pictured) says work has started on the first of a potential series of gigafactories as it scrambles to ramp up domestic battery manufacturing capacity for energy storage systems and EVs, after foreign investors and partners quit the country over the war with Ukraine.

Will Russia achieve 'technological sovereignty' for the automotive industry?

Mishustin told a meeting of deputy prime ministers on December 26 that Russia had to achieve “technological sovereignty” for the automotive industry in particular — and state-owned corporation Rosatom had started building a 4GWh lithium ion batteries plant in the Baltic Sea enclave of Kaliningrad. The plant should start operations in 2025.

How many EV batteries will Kaliningrad produce a year?

Rosatom says the Kaliningrad gigafactory will produce 50,000 EV batteries annually. US-based battery producer EnerSys announced last March that it was suspending its operations in Russia following the country’s “illegal military action against a sovereign Ukraine”.
