

## SolarInvert Energy Solutions

# San Diego energy storage power manufacturer

## Overview

---

Who owns UC San Diego's energy storage system?

The 2.5 MW, 5 MWh energy storage system at UC San Diego was purchased from BYD, the world's largest supplier of rechargeable batteries. BYD's energy storage system uses high performance lithium-ion iron-phosphate batteries that are known for being highly reliable and environmentally-friendly.

How important is energy storage in California?

Energy storage is considered so important that the California Public Utilities Commission (CPUC) decided last year to establish an unprecedented energy storage target: 1.3 gigawatts (GW) of energy storage is to be procured and installed by three of the state's investor-owned utilities by 2024.

What are energy storage systems?

Energy storage systems are technologies that convert electricity into another form of stored energy and then convert the energy back to electricity at another time. Energy storage helps integrate intermittent renewable resources, such as solar power, and provides power when it is needed for consumption.

Why is energy storage important?

Energy storage helps integrate intermittent renewable resources, such as solar power, and provides power when it is needed for consumption. The technology is considered key to enhancing grid reliability as well as grid resiliency in the face of adverse conditions.
