

SolarInvert Energy Solutions

Serbia Sun Room Photovoltaic Panel Manufacturer

Overview

Is Serbia a good market for solar energy?

In conclusion, Serbia is still a very young but promising market in the solar energy sector, with some fast-growing solar distributors. Many top solar distributors, solar panel manufacturers and suppliers are in partnership with European companies.

Why is solar energy becoming an attractive prospect in Serbia?

There are several reasons why solar energy is becoming an attractive prospect in Serbia, and we'll be looking at some of them. Solar solutions or projects appeal massively in Serbia because they're durable. According to research, the average lifespan of a solar panel is 20-25 years, while that of the battery and inverter is a decade.

Will Serbia offer solar incentives to power production companies?

The Serbian government announced that it would offer power production firms solar incentives to encourage and promote rooftop solar installations in the country. The government also announced that the companies selected for this benefit would be determined through the auctions.

Who is PFM solar?

It was founded in 2010. The company started as an importer and distributor of solar equipment. However, in more recent years, it has evolved into a manufacturer that specializes in the production of PFM solar collectors. The company is also a leading installer in Serbia.

What is a solar distributor?

To the average consumer, solar distributors are the least popular component of the solar energy value chain, but they play a very important role. Their function is to move the solar equipment from the manufacturing plants to the warehouses of the solar retailers, making it more accessible to solar shoppers

like you and me.

How does the Solar System affect the environment in Serbia?

Unlike fossil fuels, the major electricity source in Serbia, the solar system has no impact on the environment. Fossil fuel consumption emits carbon dioxide, which is a greenhouse gas, into the environment. This emission traps heat in the atmosphere and causes global warming. It doesn't end there.
