How to get uninterrupted power supply?

To get uninterrupted supply nowadays power backups such as inverters and UPS are used commonly. If it is a traditional UPS it is difficult to know remaining power and time till it can supply energy in terms of power. In order to overcome this issue, a design is proposed in the following paper.

What is a microcontroller based intelligent uninterrupted power supply (UPS) system?

Working model of microcontroller based intelligent Uninterrupted Power Supply (UPS) system for power management in laboratory is worked upon. The appliances of lab viz. computers, fans, lights are automatically controlled during power failure according to their priority to ensure optimal utilization of UPS power.

How to use ups when power fails?

One should go for effective utilization of available charge in UPS when power fails. Most of the UPS systems indicate beep during power failure and interval between two beeps indicates the remaining time, the battery can supply power. User should be aware of the run-away time and according to priority he/she has to operate the appliances.

Can microcontroller based intelligent uninterrupted power supply system be used in laboratory?

In order to overcome this issue, a design is proposed in the following paper. Working model of microcontroller based intelligent Uninterrupted Power Supply (UPS) system for power management in laboratory is worked upon.

What is smart power systems?

Smart Power Systems offers a unique, uninterruptible power supply that provides an unmatched level of power and protection to your servers. With our DDS-RT-TBF, you are able to get the correct amount of power no matter the environment in which you are working.
