

# **Solar energy storage cabinet coupling system**

## Overview

---

### What is DC-coupling solar-plus-storage?

The DC-coupling solar-plus-storage design means that an energy storage system connects to a solar system via DC side (as shown in Figure 2). In this solution, a pre-assembled energy storage interface of a PV inverter will be necessary. Inverter suppliers represented by Sungrow have launched more product portfolios.

### What is a DC coupling system?

The DC coupling system is also suited for distributed energy systems and microgrids, where ease of installation and reduced upkeep are critical. Its streamlined design minimizes the number of components required, which reduces the complexity and maintenance efforts while ensuring efficient energy management over the long term.

### What is solar-plus-storage & why is it important?

Energy storage is one of the most effective solutions to address the issue. Likewise, as the cost of PV modules continues to fall, and batteries follow a similar downward trajectory, solar-plus-storage application is in growing demand among industry players.

### How to solve solar clipping loss & grid volatility?

Taking Japan's Akita Odate FiT (Feed-in Tariff) project as an example, a typical case of solving solar clipping loss and grid volatility by installing energy storage on the DC side. The limited AC capacity of the project which received FIT subsidies is 49.5kW, and the DC side is of 350kW, which features a striking DC/AC ratio of 7.

### Can a solar inverter be used for bidirectional charging and discharging?

algorithms. The PV inverter can be used for bidirectional charging and discharging applications. Sungrow is one of a few inverter manufacturers that

can provide bidirectional charging and discharging solar-plus-storage solutions.
