Solar power storage in China in Brasilia

Overview

China General Nuclear Power Group (CGN) has brought its first self-built greenfield solar power project in Brazil to full capacity operation, marking a significant expansion of its clean energy footprint in Latin America's largest economy. Why is energy transition important in Brazil & China 2025?

Energy transition, particularly the challenges of expanding renewable energy, took center stage at the third panel of the Summit Valor Econômico Brazil-China 2025, held Wednesday in Shanghai. Brazilian Minister of Mines and Energy Alexandre Silveira stressed the need for multilateralism to confront the climate crisis.

Does Brazil need more hydroelectric power?

Li Yinsheng, president of China Three Gorges International, acknowledged Brazil's extensive hydroelectric infrastructure but cautioned that climate variability and capacity limits make it necessary to expand installed generation capacity—especially in light of Brazil's reindustrialization plans.

Could Brazil be a destination for tech-related investment?

Li Sisheng, vice president of Power China International, said Brazil's competitive edge in renewable energy could position it as a destination for tech-related investment, particularly in data centers designed for artificial intelligence.
