

SolarInvert Energy Solutions

Solar powered house generator in Uzbekistan

Modular design,
unlimited combinations in parallel
BUILT-IN DUAL FIRE PROTECTION MODULE

Overview

What is a solar energy roadmap for Uzbekistan by 2030?

This section presents a solar energy roadmap for Uzbekistan by 2030. It is based on current measures being implemented in Uzbekistan to break down the possible barriers to solar energy deployment discussed in the previous section. It aims to facilitate the government's deliberation of its solar energy strategy and focuses on:

Will Uzbekistan buy electricity from a new solar power plant?

This support will secure the obligations of the state-owned National Electric Grid of Uzbekistan JSC to purchase electricity from a new 100-megawatt (MW) solar power plant to be constructed and operated by Voltalia (France) in the Khorezm region. The solar plant is scheduled for commissioning in November 2025.

Who owns Uzbekistan's largest solar power plant?

Established in 1966, it is owned by 68 members—49 from the region. ADB and Masdar have signed three loans to build three solar power plants in Uzbekistan's Surkhandarya (Sherabad), Samarkand, and Jizzakh regions, generating a total of 897 MW, making them the region's largest solar power development.

What is Uzbekistan's solar energy vision?

It outlines the sustainable energy environment solar energy could deliver and offers a timeline up to 2030. In this vision, Uzbekistan succeeds in maximising the benefits of solar energy capacity for both electricity and heat, making solar energy one of the country's major energy sources.

Will ADB and PJSC build solar power plants in Uzbekistan?

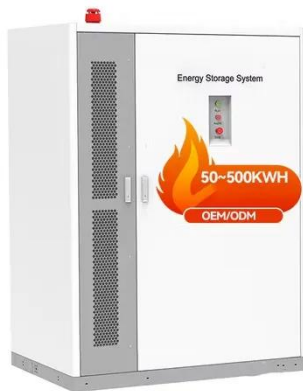

TASHKENT, UZBEKISTAN (6 April 2023) — The Asian Development Bank (ADB) and Abu Dhabi Future Energy Company PJSC (Masdar) have signed three

loans to build three solar power plants in Uzbekistan's Surkhandarya (Sherabad), Samarkand, and Jizzakh regions.

Will Uzbekistan reach its maximum capacity of solar energy?

Nevertheless, a more comprehensive set of policies and support mechanisms will be required to reach Uzbekistan's maximum capacity of solar energy and further increase solar energy toward 2030. The government should consider bundling the range of actions needed to ensure the use of all types of solar energy resources.
