

## SolarInvert Energy Solutions

# Spanish optical fiber energy storage equipment

## Overview

---

Why do we need energy storage systems in Spain?

Energy storage systems in Spain are a key element in the fight against climate change, as they help us to address the challenge of the energy transition. These systems make renewable energy production more flexible; and therefore help us to guarantee its integration into the Spanish electricity system.

Which country has the most energy storage systems in Europe?

With more than 20,000 megawatts, Spain is the country with the largest number of energy storage systems in Europe measured by power, and has the second largest number of projects: 128 in total; second only to Germany's 169.

How much does storage cost in Spain?

Namely, from 43 €/MWh (lower case) to 52.5 €/MWh and from 47 €/MWh (high case) to 56.5 €/MWh. This is comparable with the 67 €/MWh LCOH for the TES with retail charges. In Spain, subsidies for storage will be granted through four calls under the PERTE ERHA1 scheme.
