

SolarInvert Energy Solutions

Specialized Solar System for Southern Europe

Overview

Can Europe make a decision on space-based solar power by 2025?

Results from SOLARIS should allow Europe to make an informed decision by the end of 2025, on proceeding with a full development programme for commercial-scale Space-based Solar Power, beginning with a subscale in-orbit demonstrator to beam power from space to Earth.

What is large scale solar southern Europe Summit?

Large Scale Solar Southern Europe Summit is back this September in Greece! Southern Europe's renewable energy sector is evolving rapidly, with Greece targeting 15GW of solar by 2030 and Turkey emerging as a solar manufacturing hub. As adoption accelerates, energy storage is taking center stage.

Is Solaris a space-based solar power project?

(SPS Alpha. Image: NASA) The European Space Agency (ESA) is proposing Solaris as a preparatory programme for space-based solar power for the region.

What is the European Space Agency 'salaris' project?

The European Space Agency is developing a groundbreaking project named SOLARIS, aimed at producing clean energy in space for use on Earth. The organization seeks to pave the way for informed decisions on the viability of space-based solar power technology by 2025.

What is space-based solar power?

The concept complements rather than competes with terrestrial renewables, because Space-Based Solar Power can make power available reliably on an ongoing 24/7 basis, providing much-needed stability to the electricity grid as the share of intermittent renewables continues to increase, reducing dependence on large-scale storage solutions.

What is Solaris & how will it impact Europe?

Solaris, which will be presented for the ESA Council meeting in November, is envisaged to address and be structured around the key development axes needed to establish the technical, political and programmatic basis for a decision on a European space-based solar power development programme in 2025.
