

SolarInvert Energy Solutions

Steel manufacturers for photovoltaic panels

**Efficient
Higher Revenue**

- Max. Efficiency 97.5%
- Max. PV Input Voltage 600V
- 150% Peak Output Power
- 2 MPP Trackers, 150% DC Input Oversizing
- Max. PV Input Current 16A, Compatible with High Power Modules

**Intelligent
Simple O&M**

- IP66 Protection Degree: support outdoor installation
- Smart I-V Curve Diagnosis Function: locate PV string faults accurately and automatically detect faults
- DC & AC Type II SPD: prevent lightning damage
- Battery Reverse Connection Protection

**Flexible
Abundant Configuration**

- Plug & Play, EPS Switching Under 10ms
- Compatible with Lead-acid and Lithium Batteries
- Max. 6 units Inverters Parallel
- AFCI Function (Optional): when an arc-fault is detected the inverter immediately stops operation

Overview

Which steel is best for solar panels?

To do so, it requires a robust supporting structure made from high-quality steel with effective corrosion protection. With ZM Ecoprotect ® Solar, thyssenkrupp Steel now offering high-performance, zinc-aluminum-magnesium-coated steels for PV mounting systems – durable, robust and sustainable.

Who are solar steel & imports?

Solar Steel and Suports are the two companies in the group dedicated to designing and supplying ad hoc photovoltaic solutions for each type of project.

What are solar panels made of?

All the profiles used in our solar panel structure systems are made of S350-GD galvanized structural steel (from Zn 450 up to ZnMg 310 gr/m²), corrosion resistant, have a very low weight and have a high strength. Because of this, the structure will last much longer than the solar panels mounted on it.

What is galvanized solar panels C section steel?

Galvanized Solar Panels C section steel is a support material for PV projects. It is a type of Z profile steel, which is a common cold-formed thin-walled steel with a thickness of generally 1.6-3.0 mm and a cross-section height of between 120-350 mm. The Z profile processing materials are hot rolled and galvanized.

Why should you choose a metal structure for solar panels?

As solar panels are becoming more and more popular around the world, more and more businesses are looking to take advantage of them. The metal structures offered by us are ideal for photovoltaic panels (solar panels), and because they are made of light steel profiles designed and manufactured with

high precision, the assembly becomes easy and fast.

Will solar Steel deliver a 1p solar tracker in Peru?

With a strong track record in the solar industry—and especially in Peru, where our solar division has been supplying trackers since 2014—Solar Steel will deliver its latest 1P configuration. The project is expected to generate around 1.2 TWh annually, which is roughly 2.5% of Peru's total electricity output.
