Thailand Chiang Mai grid-side energy storage policy

Overview

Does Thailand have a smart grid plan?

Thailand have already has a Master Plan for Smart Grid Development (2015 – 2036). The three main utilities (PEA, MEA, EGAT) have already been taken on some Smart Grid initiatives. A few Smart Grid pilot projects in Thailand will be taken place soon, including Pattaya, Kood & Hmark Islands, Mae Sarieng & Mae Hong Son cities.

Can Thailand use energy storage?

Although Thailand is a regional leader in renewable energy, its use of energy storage is nascent. EGAT undertook some studies on the potential for energy storage and is piloting three battery energy storage installations. One is located alongside a solar project in Mae Hong Son Province to improve power supply stability.

How can Thailand manage its energy transition?

Thailand can manage its energy transition and solve the energy trilemma of sustainability, security and affordability by accelerating renewable power additions and grid capacity expansion, while limiting new thermal power capacity addition.

Why is Thailand relying on more than just solar?

To close this gap, Thailand is relying on more than just solar. The government's Alternative Energy Development Plan (AEDP) promotes energy diversification, including storage systems and emerging technologies like green hydrogen. These strategies are designed to not only boost generation capacity but also ensure energy stability and resilience.

Does Thailand need a power reserve margin?

It would also need to scale the programs to expand in tandem with the growth of its renewable energy market. According to the Ministry of Energy, Thailand

has a power capacity reserve margin of 50%, significantly higher than the recommended reserve margin of 15-20%.

What is Thailand's 2024 Power Development Plan?

Thailand's 2024 power development plan (PDP) aims to increase renewable energy use, highlighting the importance of BESS alongside solar panels and wind turbines. This could create new business opportunities for entrepreneurs if prices decrease or new technologies emerge for stationary batteries.
