Thailand lithium battery energy storage cabinet installation factory is running

Overview

Does Thailand need a battery energy storage system?

Thailand may lack the Battery Energy Storage Systems (BESS) necessary to navigate supply and demand challenges. The 2024 PDP draft included 10,000 MW of BESS, but this may see the country struggle to fulfil carbon neutrality and Net Zero commitments over the coming decades.

Who owns the Chai Badan substation – battery energy storage system?

The Chai Badan Substation – Battery Energy Storage System is owned by Electricity Generating Authority of Thailand (100%). The key applications of the project are renewable energy integration, electric energy time shift and grid support services. Electricity Generating Authority of Thailand is the owner.

What are the advantages of energy storage system in Thailand?

The battery cabinet and PCS enclosure also adopt high protection level. Hence, the energy storage system can maintain efficient yield without derating in hot and wet environment in Thailand.

Why is battery storage a problem in Thailand?

This is partly due to a lack of clarity on how battery storage fits into existing electricity infrastructure. In 2022, the Thai government approved 24 BESS projects, all of which were located alongside solar operations. Their total combined storage capacity was 994 MW.

Could a sodium-ion battery be a new business opportunity in Thailand?

The Federation of Thai Industries' Renewable Energy Industry Club sees potential in sodium-ion battery (SIB) production as an alternative to lithium-ion batteries. SIBs, made from rock salt, could offer a new business opportunity given Thailand's abundant rock salt reserves.

How many mw can a solar generator store in Thailand?

Their total combined storage capacity was 994 MW. Interestingly, this allowed generators to sign semi-firm power purchase agreements (PPAs) with the Electricity Generating Authority of Thailand (EGAT) with minimum availability guarantees. Many solar projects in Thailand have non-firm PPAs in place due to a lack of storage on site.
