

## SolarInvert Energy Solutions

# Three-dimensional container energy storage factory

## Overview

---

What are the applications of energy storage system?

The energy storage system can achieve applications such as solar energy storage integration, energy transfer, primary frequency regulation, secondary frequency regulation, reactive power support, short-circuit capacity, black start, virtual inertia, damping, etc. in conjunction with photovoltaic power generation.

How a three-dimensional energy structure is constructed?

A three-dimensional energy structure is constructed in the project by utilizing the reserve land. The steel structure overhead method is adopted to achieve integrated application of light storage and charging, solving the problems of parking, charging, and peak load shifting in the park.

What are commercial energy storage products?

High-quality commercial energy storage products can achieve real-time monitoring of remaining capacity and load size of power lines with the support of energy management systems, and can interact with energy units such as distributed photovoltaics and charging equipment.

What is a shared energy storage power station?

This project is the first shared electrochemical energy storage power station of SVOLT, with a rated total installed capacity of 50MW/100MWh for the energy storage system. Shared energy storage can reduce the investment cost of new energy projects, play a role in power regulation, and promote the matching of power supply and demand.

What is energy storage & how does it work?

In the event of a power outage or sudden malfunction in the power grid, household energy storage can be put into standby mode to ensure basic electricity consumption. Energy replenishment can be achieved during peak

electricity consumption to supplement insufficient power supply in the power grid and avoid grid overload and faults.

What is photovoltaic power station energy storage project in Shandong?

It is one of the first batch of photovoltaic power station energy storage projects in Shandong, equipped with many functions such as peak load shifting, AGV/C dispatching, primary/secondary frequency regulation, etc. It can meet various requirements such as charging by abandoned light, demand side response, and grid side safety.
