

SolarInvert Energy Solutions

Togo UPS Uninterruptible Power Supply Agent

APPLICATION SCENARIOS

Overview

What are the benefits of using Wago's uninterruptible power supplies (UPS)?

Key Benefits: In the event of short-term power outages, WAGO's Uninterruptible Power Supplies (UPS) bridge instabilities and keep your system running safely. For longer outages, critical processes can be safely maintained using our UPS solutions to prevent unwanted impacts and data loss.

What is a Delta ups?

With its wide range of Uninterruptible Power Supplies (UPS), Delta offers a competitive edge to businesses in need of first-rate power solutions. Delta UPSs are designed to ensure that companies can protect their mission critical applications by maintaining a steady flow of energy under adverse circumstances.

What is a 3 phase UPS?

In the Ultron UPS family, three-phase online UPSs have power ratings of up to 4000 kVA, perfect for data centers, industrial facilities, and more. Three-Phase online modular uninterruptible power supply systems from the Modulon UPS family offer scalability and redundancy in a single frame, with up to 600 kVA.

Why do you need an UPS system?

For longer outages, critical processes can be safely maintained using our UPS solutions to prevent unwanted impacts and data loss. The required buffer or bridging time, and thus the design of the uninterruptible power supplies, depends on the connected load and is determined before installation.

Why should a business use a Delta ups?

Delta UPSs are known for efficiency and for saving not just energy, but money that would be wasted by less advanced devices that require too much power. The growth of a business should never be at risk of limitation or delay due to avoidable technical restrictions of existing power hardware.

What is a capacitive uninterruptible power supply?

This will dictate the type and size of the energy storage. The capacitive uninterruptible power supplies are suitable as base devices for critical applications and high system availability, such as interconnected industrial systems in the automotive sector or in intralogistics, as well as for high-current applications with short buffer times.
