Tokyo Super Farad Capacitor

Overview

What are supercapacitors & EDLC?

Supercapacitors, also known as ultracapacitors and electric double layer capacitors (EDLC), are capacitors with capacitance values greater than any other capacitor type available today. Supercapacitors are breakthrough energy storage and delivery devices that offer millions of times more capacitance than traditional capacitors.

Where can I buy 500 F supercapacitors / ultracapacitor?

Supercapacitors / Ultracapacitors 500f 2.7V +50% / -20% tol. Supercapacitors / Ultracapacitors 500f 2.7V +50% / -20% tol. 500 F Supercapacitors / Ultracapacitors are available at Mouser Electronics. Mouser offers inventory, pricing, & datasheets for 500 F Supercapacitors / Ultracapacitors.

Can a supercapacitor be used as a secondary battery?

Supercapacitors have characteristics that are common to both batteries and traditional capacitors. As a result, a supercapacitor can be used as a secondary battery when applied in a DC circuit. These devices are best suited for use in low voltage, DC hold-up applications such as embedded microprocessor systems with flash memory.

How long does a super capacitor last?

The life of supercapacitors will double for every 10°C decrease in temperature or voltage by 0.1V. Supercapacitors operated at room temperature can have life expectancies of several years compared to operating the capacitors at their maximum rated temperature. L1= Load life rating of the super capacitor (typically 1000 hours at rated temperature).

Are supercapacitors suitable for pulse power applications?

Supercapacitors are ideally suited for pulse power applications, due to the fact the energy storage is not a chemical reaction, the charge/discharge behavior

of the supercapacitor is efficient. Supercapacitors are utilized as temporary energy sources in many applications where immediate power availability may be interrupted.

How do you measure the capacitance of a supercapacitor?

Supercapacitors have such large capacitance values that standard measuring equipment cannot be used to measure the capacity of these capacitors. Capacitance is measured per the following method: Charge capacitor for 30 minutes at rated voltage. Discharge capacitor through a constant current load. Measure voltage drop between V_1 to V_2 .
