Ukraine Energy Storage Batteries 2025

Overview

DTEK, Ukraine's largest private energy company, and Fluence Energy, a global energy storage company, have announced the early start of commissioning for Ukraine's largest battery energy storage project with 200 megawatts (MW) of connected power. How many energy storage plants are there in Ukraine?

The six energy storage plants will be located at multiple sites across Ukraine, with capacities ranging from 20 MW to 50 MW and a total capacity of 200 MW. Together, they will store up to 400 MWh of electricity – enough to supply two hours of power to 600,000 homes (equivalent to roughly half the households in Kyiv).

Why is Ukraine investing €140 million in energy storage?

The €140 million total investment aims to enhance power grid stability, bolstering Ukraine's energy security and independence. The project will be the biggest operational energy storage portfolio in Eastern Europe at the time of commissioning.

What are battery-based storage systems?

The battery-based storage systems will provide frequency and power balancing services to stabilize the Ukrainian power grid on behalf of Ukrainian Transmission System Operator Ukrenergo. Unlike conventional power plants, battery assets provide their response within milliseconds.
