

SolarInvert Energy Solutions

Ukrainian grid-side energy storage

Overview

The first pilot deployment of a large-scale electrochemical energy storage system (ESS) has been completed in the Ukraine, less than a year after system supply contracts were signed. Why is Ukraine investing €140 million in energy storage?

The €140 million total investment aims to enhance power grid stability, bolstering Ukraine's energy security and independence. The project will be the biggest operational energy storage portfolio in Eastern Europe at the time of commissioning.

Is the Ukrainian power grid still stable?

As of now, the Ukrainian power grid is stable, operating at a frequency of 50 Hertz. However, it's risky to maintain this stability indefinitely, especially during a war, according to a Ukrenergo spokesperson.

How many energy storage plants are there in Ukraine?

The six energy storage plants will be located at multiple sites across Ukraine, with capacities ranging from 20 MW to 50 MW and a total capacity of 200 MW. Together, they will store up to 400 MWh of electricity – enough to supply two hours of power to 600,000 homes (equivalent to roughly half the households in Kyiv).
