Uninterruptible power supply box battery

Overview

What is an uninterruptible power supply (UPS)?

An uninterruptible power supply (UPS) offers a simple solution: it's a battery in a box with enough capacity to run devices plugged in via its AC outlets for minutes to hours, depending on your needs and the mix of hardware.

Why do you need an uninterruptible power supply battery?

A properly sized and well-maintained uninterruptible power supply battery can grant your systems enough time to either ride out short outages or safely shut down equipment when a long-term outage occurs.

Do smart devices need an uninterruptible power supply (UPS)?

Many smart devices have built-in battery packs, with modern laptops packing enough cells to last a whole day. However, typical desktop computers, routers, and similar devices still need to be plugged into a power source all the time to work. That's where an uninterruptible power supply (UPS) comes in.

How does a UPS battery work?

In essence, the battery is what guarantees the device's capability to supply power instantaneously during an unexpected outage. The moment your UPS detects a drop in voltage or a complete power failure, the battery kicks in to deliver power, ensuring that your critical loads experience no downtime.

Can you replace a battery in a ups?

The built-in battery is replaceable, too. You might need to temporarily shut down devices while you swap them out, but this system offers lots of extra power with a single UPS. An added bonus is the LCD readout on the front; it's clear and intuitive and lets you know how much power is left.

How does a ups charge a battery?

When the main power is stable, the UPS charges the battery through an internal charging mechanism. The battery remains on standby until a power disturbance occurs.
