# Uninterruptible power supply equipment in Boston computer room

# Overview

Which is the best uninterruptible power supply manufacturer?

With 20 years of R&D experience in UPS industry, SCU, one of the biggest uninterruptible power supply manufacturers, provides 6KVA to 900KVA UPS products that are highest levels of availability, reliability and efficiency. SCU UPS products cover applications from IT rooms to large data centers and industrial plant and so on.

What is an uninterruptible power supply (UPS)?

An uninterruptible power supply (UPS), is a device or system that maintains a continuous supply of electric power to certain essential equipment that must not be shut down unexpectedly. In simplistic terms, UPS is a device that provides battery back-up power to IT equipment should utility power be unavailable, or inadequate.

Why is an uninterruptible power supply important?

An uninterruptible power supply serves as a backup power source that takes over when the main power fails. Here are some key reasons why having a UPS is crucial: Prevents Data Loss: Sudden power outages can lead to incomplete transactions or corruption of data. A UPS provides the necessary time to save work and shut down systems properly.

How do I Choose an uninterruptible power supply for a server room?

These are the basic of choosing an uninterruptible power supply for a server room environment: load size and matching to the mains power supply characteristics, the battery runtime required, and type of UPS topology preferred. Once this assessment has been made other considerations can be made.

How do I choose the right uninterruptible power supply?

There are several aspects to consider when selecting the right uninterruptible

power supply to protect your server room or datacentre environment. Load Sizing Per Phase: the first step is to decide how much power is to be drawn by the IT load and whether the loads require a single or three-phase.

How does ups work if a power supply fails?

Normally UPS converts AC power from Utility to DC for charging the connected battery. When the utility power fails, UPS electrical device works like backup power, and UPS will switch to battery mode, inverts DC to AC power and continue to run the equipment.
