Uninterruptible power supply for substation in Antwerp Belgium

Overview

Why should you install a UPS system in a substation?

With UPS installations in plants and substations, you can guard against downtime throughout your entire infrastructure. Avoid the irony of a power plant without power with uninterruptible power supplies to ensure the continuity of the utility's supply and minimize disruptions.

What is an uninterruptible power supply (UPS)?

An uninterruptible power supply (UPS) greatly benefits homes, offices and businesses. It ensures a continuous power supply, even during power outages or fluctuations. This is crucial for sensitive electronic devices such as computers, Wi-Fi routers, and point-of-sale (POS) equipment.

Why do you need a 3-phase uninterruptible power supply (UPS)?

With its compact design and easy installation, a UPS is an essential investment for uninterrupted productivity and peace of mind. A 3-phase uninterruptible power supply (UPS) plays a vital role in data centers, edge computing environments, or commercial or industrial applications where uptime and data integrity are critical.

Does eneria offer an uninterruptible power supply?

Thanks to our UPS offer, Eneria can guarantee an uninterruptible power supply for data center, in the field of healthcare, banking and insurance, telecommunications, industry or events. We offer integrated and customised systems that meet your electricity needs, thanks in particular to gensets equipped with Uninterruptible Power Supplies (UPS).

What is a 3 phase UPS?

A 3-phase UPS with VRLA or lithium-ion batteries reduces the risk of costly downtime by delivering backup power to the load until longer-term backup power (such as generators) can start up or utility power returns. UPS

management software enhances the functionality and efficiency of uninterruptible power supply (UPS) devices.

What auxiliary equipment does a substation use?

Each substation employs numerous auxiliary equipment including transformers, circuit breakers, switchgear, relays, and SCADA systems performing a range of tasks depending on the locale's specific needs. With UPS installations in plants and substations, you can guard against downtime throughout your entire infrastructure.
