Uninterruptible power supply maintenance for Western European communication base stations

Overview

What is an uninterruptable power supply system (UPS)?

2.1 An uninterruptable power supply system (UPS) is defined as a device which for a specific period of time supplies continuous power to radio equipment independent of any power failures in the ship's main or emergency source of electric energy.² rechargeable accumulator batteries, complying with the requirements of annex 1.

Can BS backup batteries be used as flexibility resources for power systems?

Therefore, the spare capacity is dispatchable and can be used as flexibility resources for power systems. This paper evaluates the dispatchable capacity of the BS backup batteries in distribution networks and illustrates how it can be utilized in power systems.

Can BS backup batteries be used in distribution networks?

This paper evaluates the dispatchable capacity of the BS backup batteries in distribution networks and illustrates how it can be utilized in power systems. The BS reliability model is first established considering potential distribution network interruptions and the effects of backup batteries.

Why should a ups be protected from a short-circuit?

The UPS should be so designed and constructed that it is protected against damage resulting from disconnecting the batteries or, with the battery disconnected, short-circuiting the UPS battery connections. If this protection is provided by electronic means it should automatically reset following removal of the open or short-circuit conditions.

Uninterruptible power supply maintenance for Western European countries

A Device that Controls the Power Supply Sources of a ...

Uninterrupted power supply to base stations increases the quality and reliability of network services. Therefore, various studies are being conducted in developed countries aimed at ...
