

**SolarInvert Energy Solutions**

# **Uninterruptible power supply output overload**

## Overview

---

How to protect a voltage-source inverter-based uninterruptible power supply (UPS) system?

In this chapter, an overload and short-circuit protection method is proposed for voltage-source inverter-based uninterruptible power supply (UPS) system. In order to achieve high reliability and availability of the UPS, a short-circuit and overload protection scheme is necessary.

What is a uninterruptible power supply (UPS)?

A UPS, or a uninterruptible power supply, is a device used to backup a power supply to prevent devices and systems from power supply problems, such as a power failure or lightning strikes.

Can a ups be overloaded during a power outage?

During a power outage this option becomes unavailable. The UPS must NOT be overloaded during battery operation when the mains is not present. If an overload occurs the UPS will protect itself and sadly drop the critical load because it has no power source for the overload.

What happens if a UPS is overloaded?

If an overload occurs the UPS will protect itself and sadly drop the critical load because it has no power source for the overload. This problem can really only be managed by knowledge and discipline unless further investment is made (which is usually quite substantial) to overcome it.

What is the minimum overload capacity of an ups?

The UPS shall have a minimum overload capability of 150 % of the rated output current for one minute. The inverter section of the UPS shall deliver the specified short circuit current. The design value for inverter short circuit shall be 200 % of rated current for 0.1 second, if no value is specified.

How do you stop a ups from overloading?

This load would typically destroy the UPS and the normal solution is to detect the overload and divert it around the UPS. This is achieved entirely automatically by a small switch which quickly connects the load directly back to the mains until the overload disappears. This switch is called a 'bypass'. So far so good.
