Uninterruptible power supply to NAS

Support Customized Product

Overview

Does QNAP NAS support an uninterruptible power supply (UPS)?

QNAP NAS provides an External Device function to support using an Uninterruptible Power Supply (UPS). A UPS can be connected by USB, SNMP, or as a Network slave. By configuring the Power Recovery and UPS settings in the Control Panel, you can add safeguards to mitigate the effects of unexpected power outages. Open the Control Panel.

How to choose the right uninterruptible power supply for Synology NAS?

Mar 2025 Choosing the right Uninterruptible Power Supply (UPS) for Synology Network Attached Storage (NAS) is crucial to protect data from power interruptions and ensure system stability. For 1-2 bay NAS devices, from 500-850VA should be enough (with desktop PC and router connected). For 4-8 bay NAS devices go from 1000-1500VA.

Should I use an uninterruptible power supply (UPS) with a USB connection?

One of the advantages of having an uninterruptible power supply (UPS) with a USB connection is that it is possible to smartly shut down any computers during a power outage. My strategy is when the UPS goes on battery, I want the Windows PC and Linux server to shut down immediately (well after a 1 minute timeout).

How do I choose a NAS ups?

It is important to choose a UPS that can provide at least this much power, as well as a bit extra to account for any other devices that may be connected to the NAS. Another important factor to consider is the runtime of the UPS. This is the amount of time that the UPS can keep your NAS running in the event of a power outage.

Does a NAS drive need a Smart UPS?

Almost all NAS drive brands support the use of a smart UPS, connected via

USB for monitoring or via the network. That said, how each NAS system reacts to a power cut and switching to the UPS battery does differ.

How do I set up a Nas If a power outage occurs?

A UPS can be connected by USB, SNMP, or as a Network slave. By configuring the Power Recovery and UPS settings in the Control Panel, you can add safeguards to mitigate the effects of unexpected power outages. Open the Control Panel. If the NAS was powered on before a power outage occurred, the NAS will automatically power on when power is restored.
