Vietnam outdoor power supply procurement

Overview

What are the different types of power purchase agreements in Vietnam?

The Decree defines two main types of Power Purchase Agreements (PPAs) in Vietnam: 1. Financial DPPA through the national grid and Vietnam Wholesale Electricity Market (VWEM), and 2. Physical DPPA via private wires.

How does the power market work in Vietnam?

Vietnam's power market operates on a 30-minute trading system, with prices updated every half hour. This Full Market Price (FMP) reflects the real-time cost of power and is used to settle payments in the wholesale market. The FMP includes: System Marginal Price (SMP) – a dynamic price based on supply and demand.

Why is Vietnam introducing corporate PPAs?

By introducing corporate PPAs, Vietnam is aligning itself with global best practices in renewable energy procurement. Until relatively recently, the state-owned vertically integrated electricity monopoly, Vietnam Electricity (EVN), was largely responsible for electricity generation in Vietnam.

Does Vietnam have a competitive power system?

Vietnam's move toward a competitive power system took a big step forward with the launch of its Wholesale Electricity Market (VWEM) in 2019. In this market, state and private generators sell electricity through a centrally coordinated system. Prices are based on real-time supply and demand, bringing more transparency and efficiency to the sector.

Can a vibrant corporate PPA market flourish in Vietnam?

The renewable energy industry has welcomed Decree 80. However, local regulation and industry practice still have a way to go before a vibrant corporate PPA market can flourish in Vietnam. Further clarity may be required on several issues, including:.

How has electricity generation evolved in Vietnam?

Evolution of electricity generation in Vietnam. Source: IEA Vietnam's move toward a competitive power system took a big step forward with the launch of its Wholesale Electricity Market (VWEM) in 2019. In this market, state and private generators sell electricity through a centrally coordinated system.
