

**SolarInvert Energy Solutions**

# **Waterproof level requirements for outdoor base stations**

## Overview

---

Is TP-Link a good wireless base station?

TP-LINK's 5GHz 300Mbps \* Outdoor Wireless Base Station is specifically designed to provide an effective solution for outdoor wireless networking applications. With its centralized management platform and high degree of flexibility, it is the ideal choice for providing point-to-point, point-to-multipoint, and outdoor Wi-Fi coverage.

How much exposure can a radio base station have?

On the ground, in houses, and other places where people reside, the exposure levels from radio base stations are normally below 1 percent of the limits. Only in the close vicinity of the antennas can the exposure limits sometimes be exceeded.

Are base stations harmful?

This holds true whether the base station is part of a 2G (GSM), a 3G, a 4G (LTE) or a 5G network. The WHO states: "From all evidence accumulated so far, no adverse short- or long-term health effects have been shown to occur from the RF signals produced by base stations." (WHO fact sheet "Base stations and wireless technologies").

What makes the Pharos series a good base station?

To maximize performance and stabilize long distance wireless transmission, the Pharos Series is built with Qualcomm Atheros enterprise level chipsets, high gain-antennas, and high-power amplifiers. In addition to excellent internal components, Pharos Series Base Stations also feature specially designed, weatherproof enclosures and PoE capability.

Can unauthorized people access a base station?

The antennas are installed in such a way that unauthorized people do not have access to the area where the limits may be exceeded. This holds true

whether the base station is part of a 2G (GSM), a 3G, a 4G (LTE) or a 5G network.

Do mobile phones need a base station?

Mobile phones and other mobile devices require a network of base stations in order to function. The base station antennas transmit and receive RF (radio frequency) signals, or radio waves, to and from mobile phones near the base station. Without these radio waves, mobile communications would not be possible.
