

SolarInvert Energy Solutions

West Africa Energy Storage Solar PV

Overview

The project aims to accelerate access to renewables in four countries located in West Africa – Chad, Liberia, Sierra Leone and Togo – with the installation of 106MW of solar PV power, battery and storage systems across the four countries. Where is solar PV installed in Africa?

Total installed solar PV in Africa is dominated by South Africa, where an increased number of installations have been carried out in recent years under the Renewable Energy Independent Power Producer Procurement Programme (REIPPPP).

How much does solar PV cost in Africa?

On-grid commissioned and planned utility-scale solar PV projects between 2014 and 2018 in Africa range from around USD 1.2 to USD 4.9/W (USD 1 200 to 4 900/kW). Although Africa is currently home to a very small set of utility-scale solar PV projects, costs have been declining over time.

What is Africa Ren's Power Purchase Agreement (PPA)?

Africa REN will construct and operate the facility under a 20-year power purchase agreement (PPA) designed to solve issues associated with intermittent energy supply, a key challenge of integrating renewable energy into the grid. Within 6 years, Senegal has added more than 345MW of clean power, accounting for nearly a quarter of its energy mix.

How will the energy system work in Senegal?

The system will utilise reserve energy when there are deficits, bring power and grid assets online after failures, and supply electricity to the cities in the northern part of Senegal during power outages.
