West Africa Power Station Energy Storage Signed Project

Overview

The new Regional Electricity Access and Battery-Energy Storage Technologies (BEST) Project –approved by the World Bank Group today for a total amount of \$465 million— will increase grid connections in fragile areas of the Sahel, build the capacity of the ECOWAS Regional Electricity Regulatory Authority (ERERA), and strengthen the WAPP’s network operation with battery-energy storage technologies infrastructure. Is West Africa on the cusp of a regional power market?

“West Africa is on the cusp of a regional power market that promises significant development benefits and potential for private sector participation,” stated Charles Cormier, Practice Manager in the Energy Global Practice at the World Bank.

How can a new era of low-carbon energy trade be achieved?

“By working together, these countries can optimize investments and economies of scale, harmonize equipment and standards, and synchronize systems to deliver the transformative power of electricity to more people and usher in a new era of low-carbon energy trade.”.

How will battery-energy storage technology benefit WAPP operators?

Battery-energy storage technologies will enable WAPP operators to store renewable energy generated at non-peak hours and dispatch it during peak demand, instead of relying on more carbon-intensive generation technology when the demand is high, the sun is not shining, or the wind is not blowing.

West Africa Power Station Energy Storage Signed Project

Nigeria: Largest battery storage system export to Africa from ...

May 8, 2024 · A Nigerian energy company is to be the recipient of the largest US government-financed battery storage system exported to Africa. Sapele Power Plc, which specialises in ...
