West Asia energy storage battery exports

Overview

Are Asian battery exports booming?

Asian battery exports to the U.S. are booming. U.S. imports of lithium-ion batteries from Asia, especially China, are surging in synch with America's rising appetite for electric vehicles, consumer electronics and battery peaker plants.

How much battery material does China Import & Export?

China imported almost 12 million short tons of raw and processed battery minerals, accounting for 44% of interregional trade, and exported almost 11 million short tons of battery materials, packs, and components, or 58% of interregional trade in 2023, according to regional UN Comtrade data.

Which country exports the most battery cells in the world?

China accounted for 74% of the world's battery pack and component exports in 2023. That same year, China controlled nearly 85% of the world's battery cell production capacity by monetary value. Data source: United Nations Statistics Division, UN Comtrade Note: Excludes trade within regions.

Will China's battery energy-storage system grow in 2025?

The annual growth of battery energy-storage systems (BESS) in China may decline to 30 gigawatts (GW) in 2025. This is a decrease from the projected 42 GW in 2024. In 2024, China and the US together accounted for 80% of the installed capacity, according to Infolink Consulting.

Which countries accounted for 80% of battery energy-storage capacity in 2024?

China and the US together accounted for 80% of the installed battery energy-storage capacity in 2024.

Which country trades the most batteries in the world?

Data source: United Nations Statistics Division, UN Comtrade Note: Excludes trade within regions. China has a major role at each stage of the global battery supply chain and dominates interregional trade of minerals.
