What brand is the Kuala Lumpur Communication Green Base Station

Overview

What is a green base station solution?

The green base station solution involves base station system architecture, base station form, power saving technologies, and application of green technologies. Using SDR-based architecture and distributed base stations is a different approach to traditional multiband multimode network construction.

What is KL Tower?

The statuesque KL Tower represents one of the most ambitious projects ever undertaken in Malaysia. Though ultimately a state-of-the-art center for telecommunications and broadcasting, the tower is also a model of innovation. Converging of retail, leisure, and entertainment. The history of KL Tower consists of five phases.

Who is Acasia Communications Sdn Bhd?

Incorporated in 1995 in Kuala Lumpur, Malaysia, ACASIA Communications Sdn Bhd is a unique ASEAN collaboration among 7 leading telecommunications providers in the region – TM (Malaysia), CAT (Thailand), Indosat (Indonesia), PLDT (Philippines), Singtel (Singapore), Nexus (Brunei) and VNPT (Vietnam) aRC (ASEAN Regional Connectivity) aXIS aXIS PRO.

What is the construction process of KL Tower?

During this phase, the construction of the tower starts with the erection of the tower shaft, then the tower head. As the final touches of the tower head were being completed, the construction of tourist attractions began. Furthermore, they were finalizing the concept of designs they wanted incorporated in KL Tower.

What is a base transceiver station?

Base Transceiver Stations facilitate wireless communication between a cellular device and network. A Base Transceiver Station consists of the following:

Antennas that relay radio message, Transceivers, Duplexers, and Amplifiers. The antenna provides network solutions by conveying radio message.

What should a base station do in a wireless communications network?

In a wireless communications network, the base station should maintain high-quality coverage. It should also have the potential for upgrade or evolution. As network traffic increases, power consumption increases proportionally to the number of base stations. However, reducing the number of base stations may degrade network quality.
