Overview

What are the different types of power plugs in Finland?

In Finland, there are two main types of power plugs and outlets: Type C and Type F. Type C: Type C plugs have two round prongs on either side of the plug, commonly known as Euro plugs. Mostly used in Europe, South America, and Africa. Type C outlets can be fit with either Type E or Type F plugs.

Which plug sockets can be used in Finland?

Type C and type E plugs can also be used thanks to their compatibility with type F sockets. Typically, type C plug sockets are not allowed to be installed in Finland: these outlets are not earthed and are therefore considered dangerous. Only type F power points are permitted because they are grounded and therefore significantly safer.

Do I need a power adapter in Finland?

However, if your devices use a different plug type or are not compatible with the voltage in Finland, you will need a power adapter and/or a voltage converter/transformer. The standard voltage in Finland is 230 V, and the standard frequency is 50 Hz.

What does a travel plug adapter look like in Finland?

When you are going on a trip to Finland, be sure to pack the appropriate travel plug adapter that fits the local sockets. But what do those electrical outlets look like?

In Finland, types C and F are the official standards. Like almost all Continental European countries, Finland has standardized on the German plug and socket system.
