

## SolarInvert Energy Solutions

# Which PV inverter should I choose in Chad

## Overview

---

How do I choose the right solar inverter?

To choose the right inverter for your home, it's important to assess the size of the solar installation, potential for future expansion, quality certification of the inverter, and after-sales service of the chosen inverter brand. To accurately plan a solar installation, users need to consider the available space in their home or business.

What are the different types of solar power inverters?

There are four main types of solar power inverters: Also known as a central inverter. Smaller solar arrays may use a standard string inverter. When they do, a string of solar panels forms a circuit where DC energy flows from each panel into a wiring harness that connects them all to a single inverter.

What should a solar inverter capacity be?

The inverter's capacity should generally match or slightly exceed the total wattage of the user's solar panel array. The inverter must be able to handle the power input from the solar panels; exceeding the inverter's limit will result in excess power being clipped, leading to energy losses during peak production periods.

Which inverter is best for a photovoltaic system?

String inverters are cost-effective and suitable for installations with consistent sunlight exposure across all panels. Microinverters are the smallest inverter out of the 4 types, designed to operate at the individual panel level in photovoltaic systems.

Why did Innovent develop a solar power plant in Chad?

The other advantage would be the preservation of the environment, important in a semi-desert country like Chad. InnoVent has therefore decided to develop the country's first solar power plant, by implanting it in Abéché, the second

largest city in Chad with 80,000 inhabitants, but which is not connected to the national electricity grid.

Is a solar inverter a converter?

A solar inverter is really a converter, though the rules of physics say otherwise. A solar power inverter converts or inverts the direct current (DC) energy produced by a solar panel into Alternate Current (AC.) Most homes use AC rather than DC energy. DC energy is not safe to use in homes.
