

## SolarInvert Energy Solutions

# Wholesale bess battery system in South-Africa

## Overview

---

Who is supplying battery energy storage systems in South Africa?

Source: Eskom. A Chinese green technology company has been contracted to supply battery energy storage systems (BESS) for the Oasis 1 cluster of projects in South Africa. Envision Energy announced the contract with the EDF Group, to supply three battery energy storage systems (BESS) amounting to 257MW of capacity and 1,028MWh of storage.

What is battery energy storage systems (Bess)?

While these advancements have reduced reliance on fossil fuels and created new jobs, renewable energy still represents a small proportion of South Africa's overall energy mix. This is where Battery Energy Storage Systems (BESS) come in, offering a critical solution to stabilise renewable power and support grid reliability.

Is battery energy storage the future of South Africa?

Battery energy storage is no longer just a future concept; it is rapidly becoming an integral part of South Africa's energy landscape. As the country seeks to overcome its energy challenges, BESS will play a critical role in ensuring a reliable, sustainable, and cost-effective power supply for all.

Is Envision Energy the largest energy storage system supplier in South Africa?

Envision Energy announced the contract with the EDF Group, to supply three battery energy storage systems (BESS) amounting to 257MW of capacity and 1,028MWh of storage. The company claims this marks the largest BESS order in South Africa and positions it as the first energy storage system supplier in the region to secure a GWh-scale order.

How does Bess work in South Africa?

South Africa's electricity grid faces significant challenges in balancing supply and demand. By storing energy and discharging it when required, BESS helps

stabilise the grid, reducing the risk of power outages. While solar and wind power are abundant, they are not constant sources of energy.

What is a Bess battery and how does it work?

The stored energy can then be released when needed, ensuring a steady supply of electricity, even when renewable sources like the sun or wind are not available. Think of BESS like a giant rechargeable battery.
